

About our Electronic Time and Attendance Systems

Time Clock

Our electronic time and attendance clock is an advanced time clock that connects to the telephone line and transmits employee punches to our time and attendance website automatically. Each payday you simply upload this information to your payroll processor. It's the simplest alternative to laborious time card calculation.

Product Overview

Employee Punch Data Collection

TimeClock primarily collects employee punch data through a Personal Identification Number (PIN) or the swipe of a card. TimeClock can also offer a biometric finger scan for tracking employee punching (sold separately).

Users of TimeClock may also be authorized to clock in/out via a web browser and view their time cards online.

Features

Need a simple way to start collecting punches? TimeClock is virtually as easy as it gets. And because TimeClock can store punches internally, it can be brought on-site to collect wherever a power source is available, from a standard wall mount to a car adapter (sold separately).

Other features include:

- Transmits nightly or on demand
- Fully functional with online features and capabilities

Connectivity

TimeClock connects to the Internet through an Analog (standard phone/fax) line for data transmission. Punches are transmitted each night over the phone for online data administration.

Because TimeClock does not require a dedicated analog phone line to connect, it's a practical and simple solution for sending timekeeping data to the web from a wide variety of workplace environments.

PrintReader is an optional (sold separately) add-on biometric device that can quickly be added to your TimeClock solution. This device uses fingerprint identification to reduce the costly expense of "buddy punching" and save employers the heavy costs associated with employee time theft. And because PrintReader can be set up in just minutes, it's a simple and quick way to reduce labor costs associated with your workforce.

Web-Based Punching

WebClock offers the ease of clocking in and out through a standard web browser. With no software to install and no hardware to maintain, tracking your employee's punches in real-time has never been more simple.

WebClock also enables employees to check their time card and/or schedule over the web. Supervisors benefit from the convenience of online access for editing employee time cards from any web-enabled workstation.

Product Overview

Employee Online Access

With WebClock, employees are able to clock in and out through a standard web browser to record punch times from any authorized computer.

Employees may also record punches through mobile devices that offer a standard web browser.

Finally, WebClock provides employees the ability to view their time card and/or a schedule, causing employees to be more aware and accountable for their labor hours.

User Experience

Web-based punching is remarkably simple. It takes only seconds to record a punch from the employee's workstation. Employee punches are immediately sent to the web for real-time administration and reporting.

For convenience, employers can authorize one or many workstations to accommodate employee punching through an IP Address.

WebClock also allows employees to report "tips," a "department," and other related punch data gathered through employee clock prompts.

Security

WebClock offers a convenient but secure method for recording employee punches. Employers benefit from the ability to restrict employee punches to only authorized workstations through an IP Address filter.

WebClock also protects employees by clearing user credentials between punches.

Secure Data Transfer
Data flow is secured by Secure Socket Layer (SSL) technology.

Product Benefits

Reduce Costs, Add Convenience

Automated timekeeping allows employers to significantly reduce the cost of employee labor while streamlining the difficult task of preparing for payroll. Organizations can minimize both human error and the time required to calculate employee time cards.

No Hardware to Install

Although time clocks can provide important functions and conveniences to organizations who identify a specific need, WebClock offers a hardware-free experience, saving you from additional cost and time associated with installing a time clock.
